00:15 college english test ban six part to listening comprehension section a directions in this section you will hear too long conversations at the end of each conversation you will hit for questions both the conversation and the questions will be spoken only once

00:39 after you hear a question you must choose the best answer from the for choices marked a b c and d then mark the corresponding letter on answer sheet one with a single line through the center conversation one mr david jackson a staff writer at the new yorker is known for his non fiction books of adventure today we go on a different kind of adventure

01:09 jackson's life of parenting his offspring david as a parent of in eleven and a fourteen year old what is the most interesting issue you are dealing with right now it's easy to focus on the challenges but so far i find these ages to be kind of wonderful they are independent and they have their own curiosities and obsessions you can talk to them about fairly sophisticated subject matter

01:39 such as politics yes that does sound refreshing compared with talking to younger children do they ask you to proofread their essays certainly with writing they do i really just try to be encouraging i think at this age editorial guidance is less important than encouragement or their books that you think are important that your children read and that all children read my general

02:09 thought is to read widely and to incorporate a love for reading learning to love to read i think is the optimal thing because it gives you a skilled you can take anywhere so you're not too concerned like some parents with the content they're reading i know i have some worries about that yeah read what you like if a child loves graphic novels or comic books whatever it is that is too

02:39 turning them on to read on turning on their imagination i feel that children's tastes in books change as they reached adolescence i know that mine certainly did when i was a teenager what do you think i think it's especially important as they get older to read subject matter that will open their eyes to the world and people so i think both fiction and nonfiction are really important because they give you the power to

03:09 to begin to perceive the world through the lives of others questions one to four are based on the conversation you have just heard question one what do we learn about david jackson from the conversation

03:40 question two what does the man think of young teenagers

03:58 question three how does the man help his kids with their essays

04:17 question for what does the woman say about herself when she was a teenager

04:37 conversation to in this episode of money talks our guest is molly sanders a university student and a successful young entrepreneur molly tell us about your business well i sell specialty clothes through a website mainly for women who have trouble

04:59 finding suitable close in main street shops because of their height or weight but i do some men's close to how did you get started in this business at such a young age are you studying fashion design actually i'm majoring in finance but i've always loved close and i started making my own at fourteen did you have any sort of training in design or sewing or was it a natural

05:29 will ability i'd have to say no to both no one taught me to make clothes and most of the things i made at first were disasters why did you persevere i think most people would give up if they kept failing especially at that age i kept on out of necessity as you can see i'm very tall and i couldn't find clothes that fit me an ordinary shops so i kept trying and

05:59 developed my skills overtime well my notes say you earned fifty thousand dollars in profits last year an extraordinary amount for a twenty year old student how did that happen did you see a gap in the market and decide to fill it know when i started university some classmates complimented my clothes and when i said i made them myself other tall women started asking if i would make their

06:29 irs and i did and before i knew it i was an entrepreneur so what are your plans for the future do you intend to open a physical store know i'll keep things online to keep costs down but i will add more clothes for children both girls and boys and possibly even for infants and i hope to add to my range of designs for men questions five to eight are based on

06:59 the conversation do have just heard question five what do we learn about the woman

07:19 question six what does the woman say about the clothes she made at first

07:39 questions seven why did the woman persevere in making clothes for herself

07:58 question eight what does the woman plan to do in the future

08:16 section b directions in this section you will hear to passages at the end of each passage you will hear three or four questions both the passage and the questions will be spoken only once after you hear a question you must choose the best answer from the for choices marked a b c and d

08:39 he then mark the corresponding letter on answer sheet one with a single line through the center passage one researchers have identified a potent new anti biotic compound using artificial intelligence the anti biotic can kill very dangerous bacteria according to a study published in the journal so the compound successfully removed deadly strains of bacteria

09:09 area in mice which are resistant to old known antibiotics the researchers say this is the first time that artificial intelligence has been used to find a powerful new anti biotic molecule why does this matter the answer is antibiotic resistance this happens when bacteria develop the ability to survive the medications designed to kill them antibiotic resistance is a serious threat

09:39 to health and the problem is growing this makes finding new antibiotics very important however in recent decades very few have been developed and those that have tend to be very similar to drugs already available these searches also tend to only focus on a narrow spectrum of chemical compounds but this is where artificial intelligence comes in

10:10 why to find new drugs scientists screen molecules to predict how effective they might be typically such screening is done by humans in the lab which is both costly and slow artificial intelligence is different it's fast and it can process a high volume it can screen hundreds of millions of compounds to identify a few interesting candidates that require

10:39 yeah experimental testing artificial intelligence is also able to predict if compounds are likely to be toxic some experts assert that this works signifies a paradigm shift in anti biotic discovery it could change drug discovery more generally questions nine to eleven are based on the passage you have just heard question nine what have read

11:09 searchers dad for the first time in history

11:26 question ten what makes it important to find new antibiotic drugs

11:44 question eleven what does the passage say artificial intelligence is able to do an antibiotic research

12:05 passage to a recent study overturned what we think we know about lying most of us have a theory about how to tell if someone is telling a lie we may develop that

12:19 theory from observations of those people we know well and see regularly but we tend to generalize what we gather from that unscientific daily research and make it a universal theory so we might imagine that liars have evasive eyes or the opposite they simply stare at you or perhaps it is more generally nervous behavior we associate with lies whatever that particular thing

12:49 hurry it's usually based on close observation of people we know and we get lots of practice on average were lied to some two hundred times per day these are mostly harmless lies but lies nonetheless but there's a problem with our theories even though they're based on all this observation the average person you and me tested rigorously on how well we detect lies

13:19 fails to do better than chance that's well established over many studies and lots of attempts by researchers to work out reliable ways to detect lies it's even relatively easy to fool lie detectors the gold standard of lie detection by training yourself in breathing techniques and symptoms suppression is there any way to get better at detecting lies the new rule

13:49 research offers some surprising advice stop looking and listen instead it turns out that if were unable to see the face but rather focus on the voice of the person in question our accuracy rate improved considerably questions twelve to fifteen are based on the passage you have just heard question twelve according to the passage how do most

14:19 people detect lying

14:34 question thirteen what does the passage say about most lies

14:53 question fourteen what have many studies uncovered about the average person's lie detection

15:14 question fifteen what advice does the new research offer regarding lie detection

15:34 section see directions in this section you will hear three recordings of lectures or talks followed by three or four questions the recordings will be played only once after you

15:49 you hear a question you must choose the best answer from the for choices marked a b c and d then mark the corresponding letter on answer sheet one with a single line through the center recording one appear to be submissive humble grateful and and demanding show great pleasure when a doctor comes into your room even if the visit his brief and useless

16:19 as don't challenge anyone with authority unless you're famous are very rich those are a few strategies for dealing with today's american medical establishment what patients want is to be treated with respect and consideration but in my experience to few hospitals and doctors are ready to do that in his book a whole new life novelist reynolds price rick

16:49 cause that his doctors chose a crowded hallway as the place to tell him he might have a tumor on his spinal cord it did not occur to the to physicians that a hallway was not the most appropriate place for that particular piece of news my surgeon who is in his mid thirties looks tired he has been overwhelmed with patients who have fallen on the winter ice he is a witty man

17:20 but sometimes his wit is unwelcome the health insurance company blue cross wants me to put you out in the snow tomorrow afternoon he tells me after i have been in the hospital for more than a week i'm terrified because i have no idea where to go i cannot walk or even lift my leg a few inches the hospital social worker strikes me as an idiot but my complaints about

17:49 her own the annoy my surgeon i have to work with these people he tells my friend doctor karen brodney when she mercifully intervenes on my behalf and arranges for me to be transferred to another hospital if you say one negative thing they get defensive she tells me later they have this kind of institutional loyalty always bring an advocate that is any other person

18:19 with you to the hospital and write down every single question and the answer the name of every doctor and nurse when people know you have their names they behave better and bruni ads if you as a patient suggest that you might like to control even part of this situation or be consulted or informed then you are considered difficult they want you to be totally

18:49 passive the entire health care system particularly hospitals and nursing homes exists for reasons that have nothing to do with taking care of patients patience or incidental questions sixteen to eighteen are based on the recording you have just heard question sixteen what does the speaker say about most american hospitals

19:31 question seventeen what does karen britney suggest patients do

19:49 question eighteen what do americans doctors expect their patients to be according to current brittany

20:10 recording to there are probably teams you've worked with that you never want to work with again

20:20 that's there must have also been other teams that she would prize reuniting with professionally in other words your team had vitality vitality comes about when the ties people form with their fellow team members are such that they stay connected even after the team breaks up what characteristics of a team make it's members more likely to stay in contact despite no longer working together

20:49 this question has been answered recently in a study published in a business journal one of the two key factors the research team discovered his sameness specifically sharing the same gender or ethnic origin the more members of a team share similar demographics the more inclined they'll be to remain associates long after the team has served its purpose after ties are established

21:19 similarity strengthens them as a result they regard these individuals with great trust and mutual understanding which motivates them to seek further opportunities for collaboration in effect people tend to create stronger and longer lasting connections with similar others someone who looks and sounds different from us may have the resources we need to be more successful yet we find them to

21:49 be significantly less credible simply because they are different if you are a fierce advocate of workplace diversity you will no doubt be horrified by such a revelation the second factor identified by the researchers is the quality of the relationships among the team members the more they trust one another share the same goals and depend on each other for the achievement of those goals the stronger that chances

22:19 of maintaining their connections despite no longer working as one team teams' with quality relationships have a shared belief that it's safe to take risks with each other and that members are obliged to share the workload and help out from personal experience i can see both the truth and the inconsistency of such studies the truth is some of my closest friendships were formed as a result of having whoa

22:49 worked together on teams and i actively seek opportunities to work with them again the inconsistency though is that i've never worked for a team more successful and cohesive than the one of which i'm a member right now and yet the four of us have very little in common and are completely different demographically so i'm unlikely to question the value of a diverse workforce questions nineteen two

23:19 twenty one are based on the recording you have just heard question nineteen what does the speaker say about a team with vitality

23:43 question twenty what do the researchers find out about members of a team

24:02 question twenty one what do we learn about the team the speaker is currently working in

24:22 recording three an american researcher who studied six hundred millionaires found how rich you can get comes down to six wealth factors she found that six behaviors are related to net worth potential regardless of age or income these were thriftiness confidence responsibility planning focus and so

24:49 she'll indifference being thrifty comes as no great surprise spending above your means spending instead of saving for retirement spending in anticipation of becoming wealthy makes you a slave to the paycheck even with an astronomical level of income she wrote to properly build wealth experts recommend saving twenty percent of your income and living off the remaining eighty percent having

25:19 confidence is another key characteristic as it helps people to be thrifty it takes confidence to live within your means it also takes confidence to invest properly instead of making investing decisions with your emotions financial planners advise that you should leave your investments alone and focus on a long term investment plan but people can't invest or manage their own money without

25:49 accepting responsibility for the outcomes many millionaires take on personal responsibility and most also happen to be self made meaning they didn't acquire their wealth through luck millionaires don't count on anyone else to make them rich and they don't blame anyone else if they fall short they focus on things they can control and align their daily habits to the goes they have set for

26:19 themselves they tend to be goal oriented and hard workers which enables them to plan financially and focus on seeing those plans through ninety two percent of millionaires surveyed developed a long term plan for their money and ninety seven percent almost always achieved the goals they sat for themselves and it is these behaviors that make it easy for them to be socially indifferent

26:50 they resist lifestyle creep the tendency to spend more whenever one earns more essentially they don't yield to pressure to buy the latest thing or to keep up with others or what they have acquired instead of being focused on what might make

them happy today they're focused on their long term wealth building plan questions twenty two to twenty five are based on the recording you have just heard

27:19 good question twenty two what to experts recommend concerning being thrifty

27:40 question twenty three how does confidence help people to be thrifty

27:59 question twenty four how do millionaires react when they fail in their investment

28:18 question twenty five why does the speaker say millionaires are socially indifferent

28:39 that's the end of listening comprehension
